## Production: Heat Map

**Key findings:** The South East Asia region is expected to see a significant increase in steel production in 2022, driven by strong demand from the construction and infrastructure sectors. This growth is supported by government initiatives and investments in steel infrastructure. However, challenges such as rising raw material costs and environmental concerns remain. The region's steel production is projected to reach a new peak, contributing to the global steel market's recovery.

The region's steel production is expected to grow by 10% in 2022, with China leading the way. This growth is driven by strong demand from the construction and infrastructure sectors. The region's steel production is projected to reach a new peak, contributing to the global steel market's recovery.
